

Mac Software and Anti-Virus

There are lots of free programs out there available to you that can increase productivity and enjoyment of your Mac. This class will introduce you to some of these free downloadable programs to assist you with work, multimedia, internet, and more. Generally, Mac computers are not as vulnerable to computer viruses as Windows-based PCs. However, a Mac-user can still pass on a virus and malware to others unknowingly. Even for Mac users it is important to install anti-virus software to keep viruses from propagating out to others. In this class we will discuss how to find, download, and run free anti-virus programs to combat this issue.

Northbrook, July 27th, from 10am – 11:30am

Instructor: Eli Lampson
